MARKET MAKER PRICE DISCRIMINATION: A NEW EXPLANATION FOR INTRADAY AND SEASONAL STOCK MARKET REGULARITIES

Author: PRAHL, WALTER HUGO

Degree: PH.D.

Year: 1994

Corporate Source/Institution: THE UNIVERSITY OF WISCONSIN - MADISON (0262)

Supervisor: PETER KNEZ

Existing inventory control models of optimal market maker behavior assume that arrival rates of buy and sell orders are determined by stationary functions of the **bid** and ask price. In many situations of interest this assumption is likely to be violated. This study analyzes optimal market maker behavior for the particularly interesting nonstationary case in which the price elasticity of demand for immediacy is a periodic function of time. The optimal policy that results may be interpreted as a form of price discrimination: **market** makers price discriminate intertemporally by **posting** higher asks and/or lower **bids** during times when the demand for immediacy among traders is relatively inelastic. Such an explanation for observed time series variation in prices, spreads and volume offers several advantages over previous explanations.

An example with specific functional forms shows that the market maker price discrimination hypothesis can account for several intraday patterns observed in actual securities markets. Motivated by the observation that taxation can acutely influence the elasticity of demand for immediacy, a second example analyzes the well-known turn-of-the-year effect. This example shows that taxation, by causing the demand for immediacy to become relatively inelastic among sellers of loser stocks, provides market makers with an almost ideal opportunity for price discrimination near the turn of the year. An explanation for the turn-of-the-year effect along these lines avoids certain well-known weaknesses of the traditional tax-loss selling hypothesis. In particular, the proposed explanation differs from the conventional "price pressure" explanation for tax-induced return seasonality in that no irrationality or ignorance on the part of traders is implied.

Interpretation of the turn-of-the-year effect as a manifestation of price discrimination leads to two new predictions. First, the buy-sell ratio of market makers is predicted to be seasonally high (low) shortly before (after) the turn of the year. Second, bid-ask spreads are predicted to be seasonally high (low) shortly before (after) the turn of the year, even after confounding price level effects are controlled for. Empirical tests of these predictions provide support for the market maker price discrimination hypothesis.

ADVERSE SELECTION AND THE BID-ASK SPREAD

Author: ELAN, DON

Degree: D.B.A.

The impact of insider information on transaction costs has been the subject of numerous academic studies. Recent models decompose the **bid**-ask spread into two parts: one part due to asymmetric information and the other part due to clearing and inventory costs. The presence of traders with superior information creates an adverse selection problem for **market**-makers **posting** a **bid**-ask spread. In turn, rational market-makers widen their **bid**-ask spread in an effort to recover from uninformed traders what they lose to informed traders.

Stoll models the relationship between the quoted **bid**-ask spread and the serial covariance of both transaction returns and quoted returns. Using data on the transaction prices and price quotations for NASDAQ stocks, he estimates the relative importance of the components of the quoted spread.

This dissertation recasts the Stoll model for the **bid**-ask spread, so that the impact of adverse selection costs on the serial covariance of returns, can be directly identified and tested. This methodology requires only transaction returns and can therefore be tested for markets where quoted bid-ask prices are not available. After deriving the theoretical model, I present empirical tests on the bid-ask spread.

Conference Date: 28 Nov.-2 Dec. 1995 **Conference Location:** Baltimore, MD, USA

Language: English **Document Type:** Conference Paper (PA)

Treatment: Practical (P)

Abstract: Electronic catalogs are the front end to the rapidly evolving Internet based global marketplace, and the gateway to a company through which customers can obtain product information, order goods and services, make payments, access customer support, and provide feedback around the clock and from anywhere in the world. The paper presents an overview of electronic catalogs technology and the results from a three phase survey of over 100 companies. The study results indicate that most existing catalogs provide only rudimentary functionalities, such as embedded graphics and simple browsing. Companies are successful in learning about the technology and in enhancing corporate image, but are not as successful in selling products. The two most important measures of catalog success are the number of visits per month and the percentage of visits resulting in sales, but the most widely used measure is the number of monthly visits. Two factors are found to have noticeable impact on the number of monthly visits: the level of overall investment in the catalog and the type of catalogs, i.e., standalone, mall, or embedded. UK - DEC HAS NEW SOFTWARE TO CONNECT POINT- OF-SALE SYSTEMS
Computergram International (CGI) 10 September 1991 p1
ISSN: 0268-716X

Digital Equipment is making a **bid** to tempt **retailers** away from bespoke systems and into using its new software product to link **retail electronic** point of sale systems and head office systems. DECartian, says the company is suitable for medium and large retailers. It runs on any VAX machine and links a range of electronic point of sales devices, from IBM 4684 for entry of sales transactions, to an ICL 9518, Siemens-Nixdorf 2000 and Omron terminal. The software can be accessed from any location in the network over either leased or dial-up lines. Prices for the systems start at GBP50k for a configuration that includes the help desk feature, the hardware, the software, consultancy and training in use of the system.*

Company: DIGITAL EQUIPMENT

Product: EFT Software (7372EF); CAD/CAM Mechanical Software (COSW);

Event: NEW PRODUCT EXTENSION (33);

Country: United Kingdom (4UK); OECD Europe (415); NATO Countries (420); South East Asia Treaty Organisation (913);
